CSTMP

MOD. FOA 925

使用説明書

INSTRUCTION MANUAL

Warning labels

★ The following warning labels appear on the sewing machine. Please follow the instructions on the labels at all times when using the machine. If the labels have been removed or are difficult to read, please contact your nearest Brother Dealer.

Be sure to connect the ground.
If the ground connection is not
secure, you run the risk of receiv-
ing a serious electric shock.

Direction of operation

Safety devices
● Finger guard
● Thread take-up cover
● Pulley cover, etc.

4. WORK TABLE AND MOTOR

Work Table

If using a commercially-available table

- The top of the table should be 40 mm in thickness and should be strong enough to hold the weight and withstand the vibration of the sewing machine.
- Drill holes as indicated in the illustration below.

Motor

CAUTION

- All cords which are connected to the motor should be secured at least 25 mm away from any moving parts. Furthermore, do not excessively bend the cords or secure them too firmly with staples, otherwise there is the danger that fire or electric shocks could occur.
- Install the correct belt cover which corresponds to the motor being used.

Motor

- Select the correct motor from those listed in the above table.
- Refer to the instruction manual for the motor for details on installing and using the motor.

Power	Motor
Single-phase	2-pole, 400 W motor
Three-phase	2-pole, 400 W motor

Motor pulley and V-belt

- Refer to the table below to select the motor pulley and belt combination.
- The belt should be an M-type V-belt.

Pulley O.D.	85	90	95	100	105	110	115	120	125	130
Belt size (inches)	M45	M45	M45	M45	M45	M45	M45	M47	M47	M47
Sewing speed (spm)	50Hz	60Hz	3100	3600	3100	4000	3600	4000	3600	4000

1. NAMES OF MAJOR PARTS

- 1 Machine pulley
- 2 Front cover
- 3 Presser
- 4 Needle bar
- 5 Upper thread nipper
- 6 Lapper
- 7 Safety device
- 8 Thread take-up cover
- 9 Finger guard
- 10 Pulley cover

2. MACHINE SPECIFICATIONS

*3,600 spm for normal operation
When sewing at a speed of 4,000 spm, the needle thread cooler (available as an option) should be used.

Use	For heavy materials			For very heavy materials			Equipped
	None	2	3	heavy	very heavy	heavy	
No. of needles	3	2	3	3			3
Needle (SCHMETZ TV-5)	#120 - #130	#140	#140	#120 - #130	#140	#120 - #130	#140
Needle gauge (mm)	5.67(54.7/64) 6.41(78.1/8) 8.05(72.5/32) 9.63(76.3/16)	4.8(3/16)	5.41(7/4) 6.41(78.1/8) 8.05(72.5/32) 9.63(76.3/16)	#120 - #130 4.8(3/16)	#140 5.41(7/4)	#120 - #130 6.41(78.1/8)	#140 6.41(78.1/8) 8.05(72.5/32) 9.63(76.3/16)
Max. stitch length (mm)	4.2						
Min. arm size (mm)	171						
Max. sewing speed (spm)	4,000* (3,600)	4,000* (3,600)					3,600

3. OPTIONAL PARTS

If the upper thread breaks due to heat, the needle thread cooler device (available as an option) should be used. (Refer to page 21.)

5. INSTALLATION

CAUTION

- The sewing machine should only be installed by a qualified technician.
- Ask your Brother dealer or a qualified electrician for any electrical work that may need to be done.
- The sewing machine weighs more than 49 kg. The installation should be carried out by two or more people.
- Do not connect the power cord until installation is complete, otherwise the machine will operate if the treadle is pressed by mistake, which could result in injury.
- Be sure to connect the ground. If the ground connection is not secure, serious electric shocks will result.
- Install the pulley cover to the machine head.

5-1. Installing the machine head

1. Install pulley cover base on machine bed with two hexagonal bolts and two washers.
2. Insert two bar cushions into the holes in the bottom of the bed.

* At this time, install the two hexagonal bolts so that they go as far as possible into the notches in the pulley cover base. Furthermore, check that the pulley cover base is parallel to the bed. (If it is not parallel, the pulley cover may touch the machine pulley.)

3. Place the machine head on the table, adjust its position in forward and backward directions by aligning it with the hole for presser bar lifter chain, and in side-wise directions by aligning it with belt hole.

4. After fastening cushions to the machine bed and pulley cover base with set screws, fix them to the table with screws. Place the work table so that the machine head is horizontal. If the machine head is not horizontal, lubrication will not be carried out correctly.

5. Connect the presser bar lifter chain to the knee lifter lever and the presser lifter pedal.

5-2. Ground wire connections

- Connect the ground wire to the sewing machine head and motor.
(Use the correct type of ground wire and washer.)
1. Remove lower thread guide holder screw.
 2. Secure the ground wire to the sewing machine head with screw and washer. (The attachment location is indicated by a ground symbol.)
 3. Pass the ground wire through the hole in the table.
 4. Connect the ground wire to the motor in accordance with the instructions in the instruction manual for the motor.

5. INSTALLATION

5-3. Installing the pulley cover

1. Place the belt (1) onto the machine pulley (2).
* Pull the belt (1) upward when installing pulley cover A (3).

2. Place pulley cover A (3) so that it is in between the eight pulley cover seats (4), and then secure it to the pulley cover base with the four screws (5).

3. Push the belt (1) downward, and then install pulley cover B (4) to pulley cover A (3) with the three screws (6).

4. If the machine is being used with the pulley attached, install the pulley belt cover (8) with the two screws (7).

5. INSTALLATION

5-4. Belt tension adjustment

1. Place the V-belt (1) onto the motor pulley (2).
2. Turn the two nuts (3) to adjust so that there is 20 - 30 mm of deflection in the V-belt (1) when it is pressed at the midway point with a force of 9.8 N (1 kgf).

5-5. Cotton stand

1. Assemble the cotton stand while referring to the cotton stand instruction manual.
2. Install the cotton stand to the cotton stand mounting hole in the work table with the nut (5).

5. INSTALLATION
6. PREPARATION BEFORE SEWING

5-7. Checking the machine pulley rotating direction

CAUTION

- Do not touch any of the moving parts or place any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

- Insert the power cord plug into the wall outlet, and then turn on the power switch.
- Depress the treadle slightly and check that the machine pulley starts to turn in the direction of the arrow.
 - If the direction of rotation is reversed, change the direction of rotation to the correct direction while referring to the instruction manual for the motor.
 - For the first 3 - 4 days of use, do not run the machine at 500 spm lower than the usual speed. This will help contribute to a longer service life for the machine.

6. PREPARATION BEFORE SEWING

6-1. Needles and threads

The needle and threads to be used vary depending on sewing conditions. Select the correct ones by referring to the table below.

Needle	Thread	
	Upper thread	Lower thread
SCHMETZ TVx5 #130	spun yarn #30	spun yarn #30
#140	spun yarn #20	spun yarn #30

6-2. Installing the needles

CAUTION

- Turn off the power switch before installing the needle, otherwise the machine may operate if the treadle is pressed by mistake, which could result in injury.

- Turn the pulley until needle holder is raised to the highest position.
- Loosen needle set screws, hold needles with their long grooved side facing front, insert them into needle holder all the way, and fasten the needle with needle set screws.

5. INSTALLATION

5-6. Lubrication

CAUTION

- Be sure to wear protective goggles and gloves when handling the lubricating oil, so that no oil gets into your eyes or onto your skin, otherwise inflammation can result. Furthermore, do not drink the oil under any circumstances, as it can cause vomiting and diarrhoea. Keep the oil out of the reach of children.

- The sewing machine should always be lubricated and the oil supply replenished before it is used for the first time, and also after long periods of non-use.
- Use only the lubricating oil (Nisseki Sewing Lube 15) specified by Brother.
 - Open the front cover, remove the rubber plug, and then fill with oil until the oil level reaches the point in between the reference lines on the oil gauge.
 - If the oil level drops to the lower reference line, be sure to add more oil.
 - Insert the rubber plug and then close the front cover.
 - Add 1 - 2 drops of oil once a week to needle bar bracket lubrication hole.
 - Periodically loosen the oil drain screw to drain out any oil which collects in the front bed oil sump. After draining the oil, tighten the oil drain screw.
 - Periodically wipe away any oil which collects in the rear bed oil sump with a cloth.

- Turn the machine pulley, so that the oil hole cover is facing upward, and then remove the oil hole cover and fill the oil tank with oil.
 - If the level of lubricating oil drops below the middle reference line on the oil tank, no oil will be drawn into the upper shaft, and the upper shaft will thus not be lubricated sufficiently. Be sure to maintain the lubricating oil level at a level above the center reference line.
- Attach the oil hole cover.

- If the machine is being used with the puller attached, remove the cover screws and fill with oil until the level reaches the upper reference line in the oil sight glass.
- If the oil level drops to the lower reference line, be sure to add more oil. After lubrication is completed, tighten the cover screws.

7. SEWING

CAUTION

- Attach all safety devices before using the sewing machine. If the machine is used without these devices attached, injury may result.
- Turn off the power switch at the following times, otherwise the machine may operate if the treadle is pressed by mistake, which could result in injury.
 - When threading the needle
 - When replacing the needle
 - When not using the machine and when leaving the machine unattended
- Do not touch any of the moving parts or place any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

7-1. Sewing

1. Switch the power on.
2. Depress presser lifter pedal ① and place the work under the presser foot.
3. Release the presser lifter pedal.
4. The machine starts running when treadle ② is stepped down.

5. After sewing the work, move the work to thread cutter ⑤ to make blank stitches, and cut the thread with it.

6-3. Threading the lower threads

CAUTION

- Turn off the power switch before threading the upper thread, otherwise the machine may operate if the treadle is pressed by mistake, which could result in injury.

Pass the lower threads as shown in the figure below.

6-4. Threading the upper threads

CAUTION

- Turn off the power switch before threading the upper thread, otherwise the machine may operate if the treadle is pressed by mistake, which could result in injury.

Pass the upper threads as shown in the figure below.

8-3. Adjusting the stitch length

CAUTION

• Turn off the power supply before adjusting the stitch length, otherwise the machine will operate if the treadle is pressed by mistake, which could result in injury. However, the motor will keep turning even after the power is switched off as a result of the motor's inertia. Wait until the motor stops fully before starting work.

- The numerals on the machine pulley scale represent the stitch length (mm), however the actual stitch length will vary depending on the type and thickness of material being used.
- 1. Open the front cover ①.
- 2. While pressing the feed adjustment button ②, turn the machine pulley toward you slowly. (The feed adjustment button ③ will move further inward.)
- 3. While still pressing the feed adjustment button ③, keep turning the machine pulley until the desired numeral appears in the center of the pulley cover windows ④.
- * The higher the value of the numeral, the larger the stitch length becomes.
- Release the feed adjustment button ③.
- (Check that the feed adjustment button ③ pops back out again.)
- 4. Close the front cover ①.

NOTE:

Do not press the feed adjustment button ③ while the machine is operating, as doing so may damage the machine parts.
When sewing with the stitch length set close to the maximum length, you will need to adjust the needle guard in accordance with the type of material and the type of thread being used.

8-4. Puller feed adjustment (Machines with puller)

1. With feed adjusting button ① lightly pressed with your finger, turn the pulley toward yourself until feed adjusting button ② goes in one step deeper.
 2. Keep pressing feed adjusting button ②, and turn the pulley to set your desired feed position on the scale to the reference line.
- The more you turn the pulley toward yourself, the smaller will be the feed.
* Adjust the puller feed after seeing the finished stitches of the work (Refer to page 13).

8. THREAD TENSION

8-1. Adjusting the thread tension

1. Adjust the upper thread tension properly by turning upper thread adjusting screw ①.
2. Adjust the lower thread tension properly by turning lower thread adjusting screw ②.

Adjust the presser foot pressure by turning wing nut ① so that the pressure is just enough to feed the work positively and keep the work from slipping.

* In case of Machines with puller the puller pressure can be adjusted as appropriate to the work by turning presser adjusting screw ②.

8-2. Presser foot pressure adjustment

9. CLEANING

The following cleaning operations should be carried out each day in order to maintain the performance of this machine and to ensure a long service life.

CAUTION

- Turn off the power switch before carrying out cleaning. The motor will keep turning even after the power is switched off as a result of the motor's inertia. Wait until the motor stops fully before starting work. The machine may operate if the treadle is pressed by mistake, which could result in injury.
- Be sure to wear protective goggles and gloves when handling the lubricating oil, so that no oil gets into your eyes or onto your skin, otherwise inflammation can result. Furthermore, do not drink the oil under any circumstances, as it can cause vomiting and diarrhoea. Keep the oil out of the reach of children.

9-1. Daily cleaning

Cleaning the machine

1. Open the looper side plate ① and clean away any thread scraps and other rubbish.
2. After cleaning, close the looper side plate ①.

Lubrication

Refer to "5-6. Lubrication" on page 7.

Checking

1. Check that the threads are threaded correctly. (Refer to page 9.)
2. If the tips of the needles are broken, replace the broken needles.
3. Carry out a trial sewing.

9-2. Changing the lubricating oil (every three months)

The lubricating oil should be changed at least once every three months.

1. Remove the 11 screws ①, and then open the forward feed arm cover ②.
2. Draw up all of the lubricating oil inside the machine into the oil bottle ③.
3. Fill the machine with oil until the oil level reaches the point in between the reference lines on the oil gauge. (Refer to page 7.)
4. Close the forward feed arm cover ② and secure it with the 11 screws ①.

[Machines with puller]

1. Remove the eight screws ④, and then open the puller top cover ⑤.
2. Draw up all of the lubricating oil inside the machine into the oil bottle ③.
3. Fill the machine with oil until the oil level reaches the top reference line on the oil gauge. (Refer to page 7.)
4. Close the puller top cover ⑤ and secure it with the eight screws ④.

* The table below shows samples of stitches made with a highly elastic fabric and a fabric which is not so elastic. Adjust the puller feed by referring to this table.

Puller feed	Fabric with high elasticity	Fabric with low elasticity
Correct	 Neither non-alignment nor sewing wrinkles.	 Neither non-alignment nor sewing wrinkles.
Insufficient	 Non-aligned, and wrinkled.	 Non-aligned, and wrinkled.
Excessive	 Non-aligned, and very wavy.	 Non-aligned, and very wavy.

10. STANDARD ADJUSTMENTS

CAUTION

- ⊘ Maintenance and inspection of the sewing machine should only be carried out by qualified personnel.
- ⚠ Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.
- ⚠ Turn off the power switch and disconnect the power cord from the wall outlet at the following times, otherwise the machine may operate if the treadle is pressed by mistake, which could result in injury. However, the motor will keep turning even after the power is switched off as a result of the motor's inertia. Wait until the motor stops fully before starting work.
- ⚠ When carrying out inspection, adjustment and maintenance
- ⚠ When replacing consumable parts such as the looper

- ⚠ If the power switch needs to be left on when carrying out some adjustment, be extremely careful to observe all safety precautions.
- ⚠ If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.

10-1. Needle bar height adjustment

- Adjust the heights of the needles ①. At this time, adjust so that each needle ① is in the center of the needle hole ② in the needle plate ③.
1. Remove the screw ④, and then remove the presser foot ⑤.
 2. Turn the machine pulley to drop the needle bar to its lowest position.
 3. Remove the rubber plug ⑥, loosen the needle bar clamp screw ⑦ and adjust so that the distance between the bottom of the needle clamp ⑧ and the top of the needle plate ⑨ is 14.8 mm.
 - * If the needle clamp is set in the way described above, the distance between the points of the needles ① and the top of the needle plate ⑨ will be 14 mm (for heavy materials and very heavy materials) when the needle clamp ⑧ is raised to its highest position.
 4. Remove the three screws ⑩, and then remove the needle plate ③.
 5. Turn the machine pulley so that the needles ① and the needle guard ⑪ are aligned, and then adjust the tilt of the needle clamp ⑧ so that there is no space between the left and right needles ① and the needle guard ⑪ at this time. Install the needle plate ③ with the three screws ⑩, and after checking that the needles ① are in the centers of the needle holes ②, tighten the needle bar clamp screw ⑦. Insert the rubber plug ⑥ with the screw ④.
 7. Install the presser foot ⑤ with the screw ⑤.

10-2. Needle and looper timing adjustment

- Make an adjustment so that, when needles ① are down lowest loopers ② reach the end of their backward travel and the distance from the needle center to the looper tip is 2.7 to 2.9 mm.
1. Remove the presser foot, needle plate and feed dogs (Refer to page 15).
 2. Remove the two screws ③, and then open the belt cover plate ④.
 3. Turn the pulley toward yourself until loopers ⑤ reach the end of their backward travel.
 4. Loosen cap screw ⑥, and then loosen two set screws ⑦ on lower belt wheel ⑧, and then loosen two set screws ⑨ turn the pulley toward yourself until needles ① come down to the lowest position.
 6. Tighten two set screws ⑦ securely, and then tighten cap screw ⑥.
 7. Loosen set screw ⑩, move looper holder ⑪ in the arrow direction until the distance between the needle center and the looper tip is 2.7 to 2.9 mm, and retighten set screw ⑩ securely.
 8. Make sure that the looper thread eyes match the needle eyes in the forward and backward travels of the loopers.
 9. Close the belt cover plate ④, and then tighten the two screws ③.
 10. Install the presser foot, needle plate and feed dogs.

10-3. Timing of loopers running clear of needles

The loopers run in back of the needles in their forward travel and in front of the needles in their backward travel. Adjust the clearance between the needles and the loopers to anywhere from 0.05 to 0.1 mm in the forward travel.

1. Remove forward feed arm cover ①.
2. The forward/back looper timing should be adjusted so that the set screw which is at the rear relative to the forward/back cam turning direction is aligned with the screw adjustment hole ② when the set screw which is at the rear relative to the up/down cam turning direction is aligned with the looper connecting rod adjustment hole ③.
- To adjust, loosen the set screw which is at the front relative to the forward/back cam turning direction, and then loosen the set screw at the rear just enough so that the forward/back cam can be adjusted. After adjusting, tighten the two set screws.
- Loosen the looper holder screw ④, and then move the looper holder ⑤ in the direction of the arrow to adjust so that the clearance between the tip of the looper and the center of the needle is 0.05 - 0.1 mm when the two are aligned. At this time, do not move the looper holder ⑥ in any direction except the direction indicated by the arrow. If it is moved in another direction, carry out the adjustments given in *10-2. Adjusting the needle and looper timing on page 16.
4. Install the forward feed arm cover ①.

10-5. Feed dog height adjustment

Make an adjustment so that the highest part of the feed dog will be 1.2 mm above the top surface of the needle plate when feed dog ① is at the highest position.

Adjust the height of feed dog ① by turning feed bar eccentric shaft ②.

Installing the Spacer
(For the denim specifications)

If stitch irregularities develop in sewing very heavy materials, adjust the sub-feed dog to the correct height by spacer.

1. Remove set screws ① and sub-feed dog ②.
 2. Place the spacer ③ under sub-feed dog ④ and retighten set screws ①.
- * The spacer is in the parts box.

10-4. Needle guard adjustment

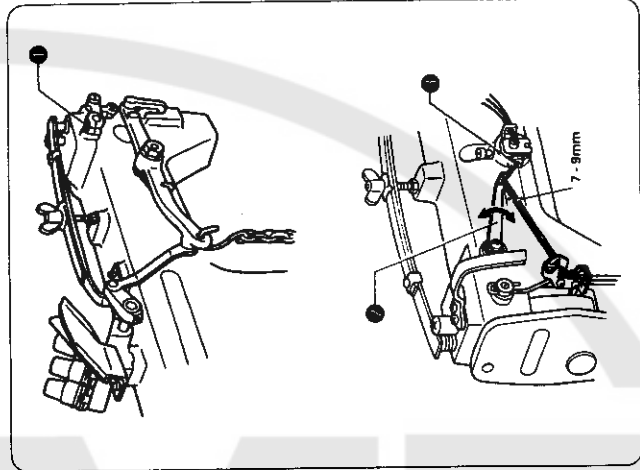

The clearance between the needle guard ① and the needles ② should be 0.2 mm when the stitch length is at the minimum setting and the loopers are moving toward the needles. The heights should be adjusted to as low a setting as possible without the loopers breaking.

1. Adjust the stitch length to the minimum setting. (Refer to page 12.)
2. Turn the machine pulley toward yourself to align the loopers with the centers of the needles.
3. Loosen the set screw ③, and then raise or lower the needle guard ① so that the distance from the bottom of the needle guard ① to the points of the needles is 1 - 2 mm.
4. Tighten the set screw ③.
5. Loosen the set screw ④, and then move the needle guard ① to the left or right to adjust so that the clearance between the needle guard ① and the needles is 0.2 mm.
6. Tighten the set screw ④.

NOTE:

For some materials and threads, the best results can be obtained if the needle guard and the needle are touching slightly when the stitch length is adjusted to the actual stitch length.

10-6. Thread release lever adjustment

Adjust so that the center of the thread release lever thread hole is 7 - 8 mm above the center of the thread hole in the upper thread tension bracket when the needle bar is at its lowest position.

1. Turn the pulley until the needle bar is down at the lowest position.
 2. Loosen the screw ① and then move the thread release lever ② up or down to adjust so that the center of the thread release lever thread hole is 7 - 9 mm above the center of the thread hole ③ in the upper thread tension bracket.
 3. Retighten set screw ①.
- * The higher the thread release lever, the tighter will be the stitches.

10. STANDARD ADJUSTMENTS

10-7. Upper thread take-up thread guide adjustment

Adjust the distance between the center of the upper thread take-up and the top of the thread guide will be 6 - 7 mm.

1. Turn the pulley toward yourself until the needle bar is down at the lowest position.
2. Loosen the screw ①, and then move the upper thread take-up thread guide ② up or down to adjust so that the distance from the top of the upper thread take-up thread guide ② to the center of the upper thread take-up hole is 6 - 7 mm.

* The higher the upper thread take-up thread guide ②, the greater will be the upper thread loops.

3. Tighten the screw ①.

10-8. Upper thread nipper adjustment

Adjust so that the maximum clearance between the upper thread tension bracket ① and the thread tension plate ② is 0.5 - 0.7 mm (for two needles) or 0.8 - 1.0 mm (for three needles).

Loosen the set screw ③, and then move the upper thread tension bracket ① in or out to adjust so that the maximum clearance between it and the thread tension plate ② is 0.5 - 0.7 mm (for two needles) or 0.8 - 1.0 mm (for three needles).

* The thread tension will become better if the clearance between the upper thread tension bracket ① and the thread tension plate ② is reduced.

10-9. Thread release shaft adjustment

Adjust the thread release shaft so that the thread tension discs loosen when the presser foot is raised and tighten when the presser foot is lowered.

1. Loosen set screw ①.
2. Make an adjustment by turning thread release shaft ② so that the thread tension discs begin to loosen when the presser foot rises 4 mm above the top of the needle plate.
3. After the adjustment, retighten set screw ① securely.

10-10. Lower thread take-up timing adjustment

Make an adjustment so that, when the loopers begin moving backward, lower thread take-up ① contacts thread ②, and is 7 mm up from lower thread take-up base ③.

1. Insert screwdriver through the adjusting hole in the lower thread take-up base, and loosen two set screws ①.
2. Raise lower thread take-up ② until it is 7 mm up from thread take-up base ③.
3. After the adjustment, retighten two set screws ① securely.

10. STANDARD ADJUSTMENTS

10-11. Installing the lapper

Insert the lapper guide plate from the front into the oval slot in the forward feed arm cover, making sure that the end of lapper is clear of the presser foot.

- **Lapper adjustment**
- Adjust felling distance of point ① by loosening set screw ②.
- After the adjustment, retighten set screw ②.
- Adjust felling distance of point ③ by loosening set screws ④.
- After the adjustment, retighten set screws ④.

10-12. Puller height adjustment (Machines with puller)

Adjust the height of puller ① so that it is 0.1 to 0.2 mm high from the top of the needle plate.

Loosen set screw ②, and move puller support ③ up or down until puller ① is 0.1 to 0.2 mm above the top of the needle plate.

After the adjustment, retighten set screw ②.

10-13. Puller timing adjustment (Machines with puller)

Make an adjust so that, when the needle bar is down at the lowest position, the mark on timing collar ② is in line with the reference line.

1. Turn the pulley toward yourself until the mark on timing collar ② meets the reference line.
2. Loosen two set screws ③, and turn the pulley toward yourself until the needle bar is lowered all the way down.
3. Retighten two set screws ③.

11. INSTALLING OPTIONAL PARTS

CAUTION

- Installation of optional parts should only be carried out by a qualified technician.
- Turn off the power switch and disconnect the power cord before installing any optional parts, otherwise the machine will operate if the treadle is pressed by mistake, which could result in injury.

Needle thread cooler		
NAME OF PARTS	Q'TY	CODE
● Needle thread cooler tank assy	1	S08758-009
● Taptite, Fan P M3×10	2	575456-001
● Felt	1	S08761-100
● Thread guide	1	S08989-101
● Screw, Bind SM 4.37-40×7	2	060680-712
● Silicone oil	1	S06704-001

The parts shown in the illustration at left are necessary when installing the needle thread cooler.

1. Install the needle thread cooler tank assembly ● to the thread guide ● with the two screws ●.
2. Insert the felt ● into the needle thread cooler tank assembly ●.

3. Install the needle thread cooler tank assembly ● to the arm with the two screws ●.

A large, light gray watermark logo is centered on the page. It consists of a semi-circular arc at the top and bottom, with the letters 'CSMP' in a bold, stylized font in the middle. The 'C' is a simple block letter, 'S' is a thick, rounded letter, 'M' is a block letter with a vertical bar, and 'P' is a block letter with a vertical bar.
